

Briefly describe how the pragma omp single command works in this program.

#pragma omp single: Executed by the first available thread and has an implicit barrier (other threads wait).

```
(kali@kali)-[~/pc]
$ ./barrier_test2
thread # 2
Inside Single # 2
Exiting Single
thread # 1
thread # 0
thread # 3
Hi again from thread # 0
Hi again from thread # 3
Hi again from thread # 1
Hi again from thread # 2
```
